

Renewables

Installing domestic renewable technologies can help to limit the amount of electricity and gas which households need to buy from energy suppliers, or minimise how much heating fuel a household needs to purchase for its heating requirements. This can help save money. There are often financial incentives available, including the Renewable Heat Incentive (see Factsheet 4.e Renewable Heat Incentive)

There are many different technologies available for producing electricity or generating heat. See more about these technologies and how they work in Chapter 6 Renewables.

Energy Action Scotland runs a City and Guilds Renewable Energy in the Home training course. This course aims to increase the knowledge and understanding of energy advisors on household renewables and low carbon technologies as realistic interventions to reduce fuel poverty.

For more information on this and other courses run by Energy Action Scotland, see our website – www.eas.org.uk
